Re: Krytol Internal Membrane (KIM) admixture approved dosage rate in Australia

Dear Sir/Madam,

Please be advised that our Technical Data Sheet for KIM Admixture states that the dosage may be varied for specific projects in consultation with Kryton's Technical Services Department. Kryton has observed the high level of quality for both materials and workmanship in the concreting industry of Australia over many years. As a result of this experience, Kryton is able to approve a dosage range that is valid for all projects in Australia:

The approved dosage for KIM Admixture in Australia shall be no less than 5kg per cubic meter, the dose shall be no more than 8kg per cubic meter of concrete and the actual dosage within this range for any given project shall be at the discretion of the distributor for Australia, Krytol Group Pty. Ltd

The dosage approval given above is valid for a period of 4 years from the date of this letter and only for projects located in the country of Australia that are constructed in compliance with the accepted standards and practices typical of Australia. All other manufacturer's instructions given in the Technical Data Sheet and Application Instruction Sheets must be followed.

Sincerely,
KRYTON INTERNATIONAL INC.

Kevin Yuers
VP Product Development
